

DATA PRIVACY & PROTECTION

Protect your sensitive data and prevent the frauds!

Data Privacy and Protection for SAP (DPP)

Your information systems hold high value business and personal data. Are you really able to monitor who is accessing the sensitive personal and business data in your systems? Can you tell what is still the standard access within a usual usage of data and what can be seen as potentially suspicious / harming for your company?

Fully works on **SAP** systems (S/4, ECC 6.0 **non-SAP** systems could be included on top of it as well).

Effectively transforms the system audit data and logs into visualised and **readable form**.

Enables to find potential **data leaks** or **fraud behaviour**. Also finds **unusual data processing** within the system.

Single point of view of the data for DPO (Data Protection Officer) and getting all necessary **reports by few clicks**.

Categorizes the data into **groups** on which the **specific trends** could be observed and creates the rules for future analysis or comparison.

If needed - the periodically (weekly/monthly) reports are created and sent automatically. **Alerts are sent immediately**.

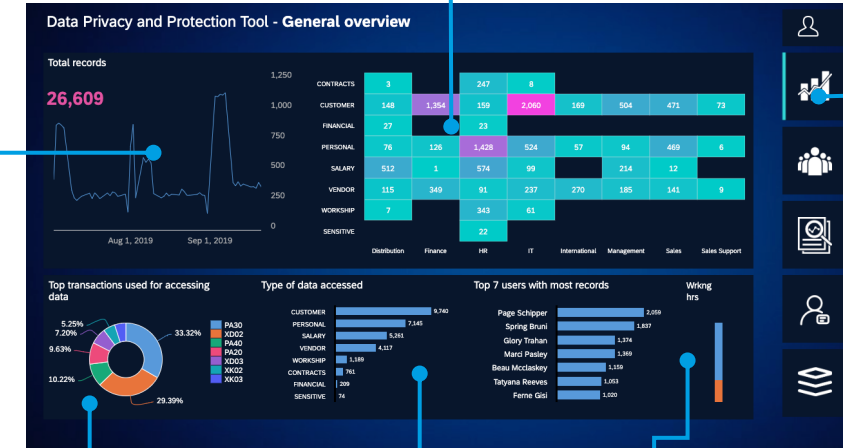

Fully **customizable** on the data collection and the desired **level of detail** which fits the customer's governance and reporting needs.

GDPR data protection coverage (fully compliant)

Easy to interpret data categorization and highlighting the peaks

Immediate time visuals of trends and overview

Channels from which the data was accessed

Top trends observation with ability to filter on

Working hours feature to identify potential data leaks

Intuitive navigation among the dashboards and reports
