# Data Privacy and Protection for SAP (DPP)

Your information systems hold high value business and personal data. Are you really able to monitor who is accessing the sensitive personal and business data in your systems? Can you tell what is still the standard access within a usual usage of data and what can be seen as potentially suspicious / harming for your company?

Fully works on **SAP** systems (S/4, ECC 6.0 **non-SAP** systems could be included on top of it as well).

Categorizes the data into **groups** on which the **specific trends** could be observed and creates the rules for future analysis or comparison.

Effectively transforms the system audit data and logs into visualised and **readable form**.

If needed - the periodically (weekly/monthly) reports are created and sent automatically. **Alerts are sent immediately.**

Enables to find potential **data leaks** or **fraud behaviour**. Also finds **unusual data processing** within the system.

Fully **customizable** on the data collection and the desired **level of detail** which fits the customer's governance and reporting needs.

Single point of view of the data for DPO (Data Protection Officer) and getting all necessary **reports by few clicks**.

# No scripting or extra-coding needed

## SINGLE-UI DESIGN

All connectivity settings, configuration, and metadata translation is embedded in a single user-friendly application.

## MULTI-PLATFORM

Seamlessly Gather Data from Multiple Systems and Security Logs with Ease.

## NO SCRIPTING REQUIRED

We have embedded all the logic within NDC Data Privacy and Protection, so there is no need of additional coding or scripting.

GDPR data protection coverage (fully compliant)

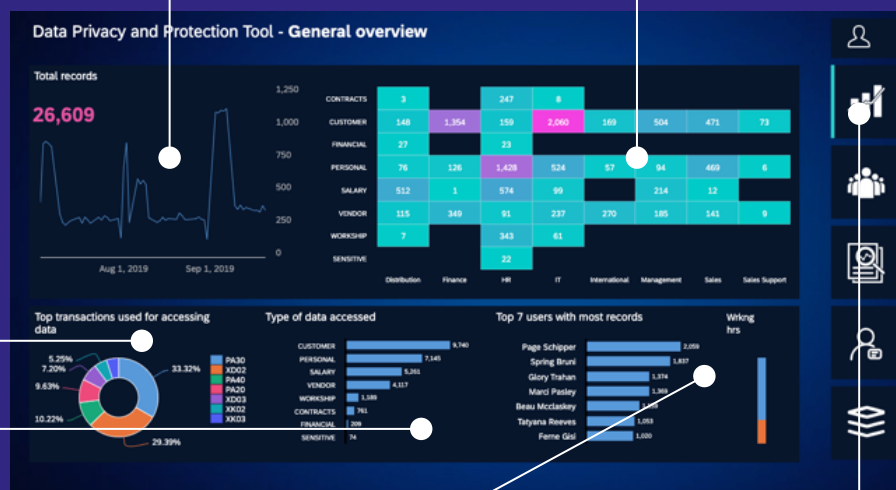

Immediate time visuals of trends and overview

Easy to interpret data categorization and highlighting the peaks

Channels from which the data was accessed

Top trends observation with ability to filter on

Working hours feature to identify potential data leaks

Intuitive navigation among the dashboards and reports
